

Bertha Vitela

Yucca Growth Infrastructure's proposed plans will significantly decrease the air quality in our area. While their new technology is better than the absolute worst air pollution, the level of methane and other airborne pollutants that would be released would worsen the air quality in Doña Ana county. These are pollutants we can't afford as air quality is already deteriorating from other sources. As a taxpaying citizen I am deeply opposed to YGI's plans for our county. I would like myself and the children of Southern New Mexico to have some semblance of air quality as we live our lives here.
