

## Sylvia Valek

I am commenting because I am against Data centers being built here in NM. I am concerned about their huge water usage, and the impacts to the environment and all living beings around it.

They are NOT sustainable and should be stopped and cancelled immediately, and any and all large centers here already should be investigated thoroughly and stopped.

We the people NEVER CONSENTED. And we do not consent to them, therefore they are and would be illegal.

It is the PEOPLES RIGHT TO have a safe and sustainable life, environment and future. To protect our planet, landscape, and all beings that live within this earth.

Please immediately STOP all large data centers from being built.

And I also urge more investigation into them, and their negative effects on air quality, and the environment in general.

I also suggest a thorough audit, to find out how these big corporations are getting financed to do this, the motives, and which politicians or state or local leaders may have given permission for them to do it against the will of the people, if applicable.

Any information gleamed should be made knowable by the public.

Any harm that has been done already to the environment or the people by these corporations or practices, there should be compensation. And banned from ever coming here again.

We do not consent to data centers or any projects that are not environmentally sustainable or that harm local life.
