

Jodi Rohr

I'm writing to strongly urge the denial of any infrastructure for Project Jupiter for several reasons. Firstly, we do not have the resources to support the AI data center. We have been experiencing drought conditions and ALL types of water needs to be conserved not wasted cooling computers. Our electrical grid is already strained and now El Paso Electric wants to raise NM rates. The emissions that a facility like this is projected to produce is greater than Las Cruces and Albuquerque combined. Project Jupiter should not be built in Santa Theresa and therefore ANY infrastructure that is needed to successfully complete it should also be denied. Please don't sell us out for short term minimal benefits.
