Project Jupiter is a terrifying and dangerous proposal. Not only will it double the electricity needs of New Mexico but it will worsen an already overheating climate, especially locally in Santa Theresa where residents will experience hotter overall temperatures due to the cooling processes for the computers. It will use water that we do not have, exacerbating New Mexico's water crisis. Project Jupiter only benefits the richest of the rich, billionaire investors from out of state and lining the purses of state politicians. It does not benefit the people of New Mexico, it threatens us with quickening environmental disaster. The people of Dona Ana County and Santa Theresa will face higher cancer rates due to air, land and water pollution the data center will produce. Oracle and Open AI, along with Yucca Growth Infrastructure and Blackstone, will be making quick profits at the fatal expense of many New Mexicans, both immediately and long term. Once this facility is abandoned in a matter of a couple of years, as the computers become obsolete and these companies turn to other communities, we will be left with the consequences of economic and environmental destruction. Say NO to Project Jupiter, NO to AI Data Centers. We need a moratorium on AI Data centers and detention camps in New Mexico and across the country.

Please take these comments with the gravity that they necessitate. The people of New Mexico are outraged and do not want data centers in our backyard.
