

Maya Durham

I urge the NMED to deny this permit for Stack Infrastructure and Oracle. From the beginning, this project and its backers have been anything but transparent. For one, representing themselves as "Yucca Growth Infrastructure" is misleading and undermines the companies' apparent support for New Mexicans. They have falsely reported that 80% of Dona Ana County residents support the data center and continually engage in deceptive practices to sway public opinion. This new plan claims to be better for the environment but this permit application proves otherwise.

Oracle and its partners will never care about New Mexicans or the environment more than they care about money.
