

ARACELLI GONZALEZ

I have lived in the Don Ana community for my whole life. This is home, I am lucky to call this place my home. Everyday I see the pecan orchards on my way to school and work. Every summer we jump in the Rio Grande and float down the river. That is home, our home is beautiful and it's our job to protect our home and community. New Mexico has been an amazing state to live in we protect our community members and do our best to succeed. But if a data center is built you're not protecting the people you have promised to protect and serve. You're backing millionaires and billionaires pockets to take advantage of our home. Why is this up for debate? This data center will create temporary jobs for a life long consequences against our community. Our community members won't have water for their families, farms, and livestock. The air quality will drastically become worse and people who live near the center will have their ears pierced by the noise pollution the data center will create. Our community members don't want to back AI, project Jupiter will ruin the beautiful community of Don Ana.
