

Katie Tindall

the building of this data site is an absolute disgrace and no one in the area desires it! we are putting a community with a limited water supply at risk for the sake of a data centre that no body wants. not to mention the amount of irreversible damage that will be done to the environment in not only the surrounding area of then intended data centre, but also the global effects a building of this scale has. i am pleading with you not to make this situation any worse and to cease the construction of this project.
