

James Hernandez

Our water is not for sale, project Jupiter threatens our fragile aquifers and household water security for so many New Mexican families. In addition, the backroom deals, closed door meetings, and forged comments from New Mexicans falsely claiming to supporting this project, undermine our trust in government and public institutions. At a time when our planet's future is at stake, we do not want another corporation coming to our state to exploit our already scarce resources. Silicon Valley Oligarchs should have no right in dictating New Mexico's climate future.
