I do not live in the area that Project Jupiter is being built in, however, I do live on the Earth and it is very plausible for this project to affect the entire planet. Due to the large scale of damage, I strongly believe that Project Jupiter is a project that is harmful to our environment and possibly the entirety of humanity. Firstly, I would like to mention the Climate Clock. The Climate Clock represents an estimation of how quickly the planet is approaching 1.5°C of global warming. These estimations are based on different sets of data and calculations. The reason why I am mentioning this is because it has estimated 2029 as the year of which the planet will reach the 1.5°C of global warming. That is in three years. This is not just an estimation; it is a countdown of how much time we have left before the planet possibly collapses. Trees, animals, even large populations of civilisation are at risk here. According to Yahoo! News, Training GPT-3 has emitted 500 metric tons of carbon dioxide into the atmosphere. Compared to this, Project Jupiter is estimated to have about 14 million tons of greenhouse gas emission. That is 28000 times more than Training GPT-3. If Project Jupiter is successful, how many years on the Climate Clock would we have left? Two? One? Less than one? As a young student, I understand that my words may have little to no effect on such large events. However, I wish to grow up, and I wish to have a future. I understand that this comment may not reach any place further than a few eyes of others, but I can do nothing but try to fight for the survival of our planet Earth. I apologise for my inability to articulate my proper emotions, but I do not want my home and my future happiness to be taken away from me without choice. Project Jupiter will most definitely be more than just a harmful inconvenience, but also a threat to Earth's survival.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
