

Aaliyah Goodyear

Our earth is already being destroyed, planet Jupiter will only make it worse, most likely irreversible. Tech giants have no reason to be richer and we don't have to ruin our earth by even attempting to make the top 1% more superior. Artificial intelligence is something we can live without, especially generative AI. It uses extreme amounts of water for non important results. We don't need Artificial intelligence to create for us, to think for us, to tell us facts, humans are lazy. We need to stop Project Jupiter, it's not okay, it's an active danger to the present and future generations, and the earth. You want to go on that multi million vacation? Well too bad, it doesn't exist, or it's too dangerous to visit due to heat, air conditions, or the land. Want to go to that underrated landscape? Well there's probably a data center. It uses the water of those who need it, families go without tap water, which only gives to the rich who own bottled water brands. It all circles back to the millionaires. We should ask the public what they decide, I can guarantee many would vote against this center, and even give an extended 60 days to comment and review this matter. I believe the air quality permit should be denied as they (Bloom energy) have history of dumping hazardous waste illegally. If this permit is not denied and instead approved then this is government assisted environmental racism, racism to those in New Mexico, racism to those around the world, discrimination to those with less than \$1,000,000 in their bank.
