

Thomas Gomez

We stopped those Air Permits we commented on when they wanted to build 42 Natural Gas Turbines to power the data center. They got denied for that. So they pivoted to something faster to build - fuel cells, which are still methane-powered. The builder has a terrible record and the threats to our environment and health are still devastating.

They are now POURING FUNDING into gathering signatures from locals on this new permit. PLEASE stop them from using methane fuel cells as well!
