Hello, I am writing because I am concerned about the risks and harms Project Jupiter poses to New Mexicans. I am submitting this comment to urge the New Mexico Environment Department to reject Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid in Doña Ana County. I am scared about my future, I want to have children, but how could I? When I'm old enough and financially stable the world won't be a place to raise a kid, there will be no water, and the temperature will be high, contamination will be at its peak. Our future isn't AI, isn't all the money you will gain, isn't global warming... Our future is life, kids, learning, intelligence, innovation. You say you want to create jobs, but you could use all that money in different purposes, I promise it would be better. I speak from my heart when I say that I really hope that there isn't a future where you can't sleep out of guilt, even if your mattress is money, even your AC is at 23°C, because outside people are dying in the heat wave. I know that we as humanity can do better. Maybe I'm foolish if I try to change your mind... But please. You are hurting our whole world. Money is wonderful, I know, I love it too, but think about it... Is it only an AI center? The project's proposed fuel cell powered grid is concerning for many reasons: • It would still produce a high level of greenhouse gas and toxic pollutants. • This technology generates toxic waste, and the process for handling this waste is still unclear. • Fuel cell technology or a centralized waste system has never occurred at this scale. • Surrounding communities' air will be negatively impacted by this development. I urge the NMED to outright reject YUCCA Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid. I ask the department to please hold a bilingual public hearing near the Santa Teresa community, so that residents can learn about the risks associated with fuel cell technology.
