

Betsy Geery

If they lied once, how can anyone believe their unproven assertions now! There is NO reasonable justification for building a data center in a desert, with limited water and power resources; especially using unproven power sources that could destroy the air quality and have immeasurable effects on our health and agriculture. All anyone needs to do is look at the centers already built ~ air, water, light and noise pollution that has severely impacted the health of all people and animals in the areas. And the economic impact on the areas - other than temporary construction jobs, little to no new job growth, but drastically rising fuel and utility costs experienced by everyone! Deny this petition!
