

Ann L Hall

The air quality permit by Yucca Growth Infrastructure should be denied. The "micro grid" that they are planning to build is a way for them to forego following laws in New Mexico and bypassing the Public Regulation Commission. Their microgrid is 3 times bigger than all the electricity generated by PNM and should follow all New Mexico laws including the Energy Transition Act. New Mexicans deserve to have business that follow the law and that protect New Mexicans air, land and water. Please deny the the air quality permit.
