

Emmanuel Ortiz

I am a resident of El Paso, and am reaching out to implore you to give the public more time to contribute their thoughts and opinions on the air quality permit needed for project jupiter's development. I'm sure you're aware there's a strong opposition from many residents and those in surrounding areas. Granting the permit would be going against the wants and best interests of the people you represent, those who will be most impacted. Bloom energy's documented history of environmental pollution should be enough to deny this permit. However, there's also the added risk of depletion of resources, and a high impact on the region's ecosystem and quality of life. Besides, multiple big tech companies have reported no true impact from their use of AI in their enterprises, with many economists warning the market has overinflated the profitability of this technology. Granting this permit should not be considered, doing so would be an act of government sponsored racism as residents in Doña Ana county are already disproportionately impacted by environmental pollution. If despite these reasons you find it acceptable to grant this permit, allow a public hearing in English and Spanish, with remote accessibility.
