Hello im writing to make you aware of the impact this data centre will have on local endangered wildlife species and the vital habitat loss and potential extinction this project may cause. Data centres admit noise and pollution 24/7 which poisons these species and disrupts breeding behaviours which is absolutely vital to keep these animals from fading into history. This data centre may also potentially cross into the path of endangering protected species like the mexican long nose bat and the Pecos pupfish, which are protected by federal law such as the Endangered Species Act (ESA). The public is already skeptical that this project has truly been regulated and checked by courts to ensure its safety to the local community and wildlife populations so for the communitys welfare and the environmental protection please consult with the us fish and wildlife services (USFWS) and the environmental protection agency (EPA) to ensure this project isnt a environmental disaster
