Please do not destroy New Mexico. It's not worth it. In 3 years this will all be irreversible and climate change will destroy us all, please do not speed up this process. It will impact everyone not just locals. Moreover, it will severely impact the locals and could dramatically decrease the air quality in their homes. Residents in Doña Ana County are already disproportionately affected by environmental pollution. How would you feel if you were unable to breathe air that's of adequate quality? The air quality permit application needs to be denied. You can make a positive impact by not going ahead with this. We already have too much methane gas in our environment. Money will not buy good quality air. Please reconsider.
