

# Pamela Farmer

Dear New Mexico Environment Department,

I am writing this to kindly ask that you reject these permits, or any permit that is proposed regarding Project Jupiter. This is only a continuation of the unsanctioned extraction and exploitation of our environment and communities. Many other residents, and I know that fuel cell technology, while framed as "less harmful," is only a way of sugarcoating the tremendously negative impacts it will have on us and our agriculture. It is not the only way to meet the immense amounts of energy required for their data center, and of course, not the most sustainable. It is fossil fuel dependent and poses a threat to our air via methane leakage, both of which produce greenhouse gases. With an excessive amount being produced, it will actively contribute to the global warming issue we are already trying to prevent. Not to mention any hazardous waste that would be slowly killing the surrounding communities and environment. I digress, the point I am trying to make is to beg that you not allow this, as it will have detrimental impacts on our land. Land that has already been harmed for generations by monetization. This is an opportunity to help confront the issues resulting in climate change, and moreover, fight for this land and its people. Greed and power mean nothing when there is no world for them to exist in. Thank you for your time.
