

Estefani Ortega

We the people of New Mexico do not want our air quality destroyed by an AI data center. Let alone the environment and ecosystems surrounding the area to be destroyed by the construction of the data center. We are also a state with limited water resources that would inevitably be depleted by the construction and retention of an AI data center. We are living in a world where climate change is drastically effecting the entire planet and construction of data centers in any US community will only negatively contribute to irreversible effects of climate change. In now way does the state of New Mexico truly benefit from the construction of this data center. We do not want our limited resources and environment to become polluted by this data center.
