STOP ORACLE AND OTHER AI DATA CENTERS FROM DESTROYING OUR PLANET!

There are heat waves occurring everywhere right now, overseas in England, New York City, all across the US and where I live here in the States. We need to hold these companies accountable. If they want to put their data centers on our land there needs to be a long and lengthy research process to ensure that they are not polluting our environment. Noise pollution and the use of clean water are very pressing issues when it comes to these data centers and especially a large one would disrupt the ecosystem terribly. We may be celebrating 250 years now, but how will the future generations celebrate the beauty of our nation if it is all dried out and they have splitting headaches from the noise. Please allow for more time for the public to comment on this matter, but also please consider not allowing this behavior to be condoned. Please protect our planet and all the people of New Mexico. Check the credibility of those who you'd be working with, but also the results of other places and the harm these data centers do.
