

Anon Anon

I do not believe that project Jupiter is good for New Mexico. I do not believe that there will be long lasting jobs with the data center. Of course now, as they are in construction, there are people working but what happens to those people when they are done? Can those pouring concrete and laying brick be the same folks you need for technical support? In three years time, maybe more maybe less, ai will be far more advanced than what we are currently seeing, thereby making a data center obsolete.

As of 2017 New Mexico has been in a drought, and in 2024 that drought was considered disaster level. What water do we have to cool the center? Water will be used and polluted.

Project Jupiter is no good for New Mexico. Ai data centers kill land and water, all our natural resources are for humankind not for Ai.

Sincerely,
Disgusting and disappointed.
