

Tina Cordova

After working on the issue of overexposure to radiation from the Trinity bomb one thing I've learned is that when there is a major unplanned environmental consequence of these large-scale industries it is often catastrophic and no one comes back to clean up the mess. The State of New Mexico must consider the worst possible outcome and consider that as it goes about issuing permits for this type of large-scale industrial project. The past is a good predictor of the future and historically industry has never cleaned up the environmental damage they've created. They've left the people of New Mexico carrying the consequence to the detriment of our health and well-being.
