

Alheli Caton-Garcia

To: The New Mexico Environment Department Air Quality Board
From: Alheli Caton-Garcia

As a young New Mexican I am deeply concerned and disturbed about Project Jupiter's construction, power sources and lack of transparency within the community. New Mexico is a place with a long history of environmental injustices - Oracle and OpenAI's Project Jupiter has come into our home, where many of our relatives are non-english speakers, or english as a second language learners. Dona Ana county is a low-income community with a history of being overburdened environmentally.

I am disturbed by the potential environmental impacts of fuel cell technology on our air quality. As well as, water consumption, and the impact on public health. I am even more disturbed by the unethical ad campaigns that have been launched, as well as the illegitimate canvassing campaigns. We must show OpenAI and Oracle that New Mexico is not for sale. That our desert is not a wasteland. It is our home, and it is your home too. Project Jupiter (OpenAI, Oracle, YGI) have been so incredibly shady it is hard to believe we even have to speak up to this - their corruption is so obvious it stinks.

Your mission? To "protect and restore the environment and to foster a healthy and prosperous New Mexico for present and future generations"...In order to do that Project Jupiter must be shut down. There must be Hyperscale Data Center moratoriums. This tech is too new to understand the lifelong impacts of these structures and their power sources.

I ask that NMED deny the application from Yucca Growth Infrastructure. Should you choose to not reject their application the people will demand that hearings between the public, YGI and NMED be held in Santa Teresa with translators available for spanish speakers. We will settle for nothing less.
