

Anthony Anderson

Project Jupiter is going to do more harm than good. We do not have enough water to sustain this and it will take away resources from valuable communities and people who deserve clean drinking water. This will also produce so much waste that we won't want to clean up, and it'll cause more problems for the earth that aren't so easily reversed. Please, take our environment into account. The public deserves 60 days extra to review and possibly deny the air quality permit due to Bloom Energy's history of dumping hazardous waste illegally.
