This data center is a major threat to both human life and our ecosystems we rely on, This is one of the absolute worst things we can do to ourselves right now. This data center, given what data centers are already doing to our beloved country and world, will absolutely dwarf the negative impacts seen by previous centers. This is using up our country's land where our already threatened wildlife and flora lives. and looking at the impacts on nearby infrastructure, homes, and businesses will by no doubt be catastrophic and displace at least hundreds of people. Refuse the data centers and be the hero to stop it. The carbon emissions from the center will by no doubt pollute, hundreds of communities and homes.
