

Khloe Dadieh

The AI Data Centers that you are trying build across this country is not for powering a search engines like chat gpt. It is for collecting mass amounts of data on people. This mission that you have to surveil regular people is absolutely ridiculous and tyrannical to say the least. The fact that you AI companies are willing to hoard the water that people need to live and also contribute significantly to climate change is quite frankly evil. You are sacrificing the well being of people and this planet to control people and frankly that is not sound like a reasonable sacrifice. If you really want to remain in power create technologies that actually benefit people, move us away from being reliant on fossil fuels, move ai data centers from being reliant on water, use the "vast capabilities" of AI to preserve and benefit this planet. If you know AI is not capable of doing so then stop project jupiter remove the investments that you have made in AI and channel your wealth to technologies that are more beneficial.
