Project Jupiter should not be continued. If it were completed, it would likely create water shortages in smaller communities and worsen climate change due to its high carbon emissions. I am personally already feeling the impacts of climate change—here, the heat index has exceeded 100°F, and the weather has been consistently severe. Additionally, the Rio Grande has already dried up before summer began, which is a clear sign of the strain on water resources. If Project Jupiter moves forward, both I and potentially thousands to billions of others could face even more extreme weather conditions and droughts.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
