Dear NMED staff, I'm concerned about the new project "Project Jupiter". It will cause lots of health issues and air pollution if the data center will be built. I am certain that us, humans, do not need more data centres and especially huge ones like this one. We are damaging our earth with pollution, plastic waste, trash and so much more. We are wasting water so fast that we will run out of clean drinking water in a couple of years. This is a serious concern for us and for the future generations. Project Jupiter will build the largest AI data center ever and will not benefit us as much as we think. Our water, air, soil will be effected in bad ways. The energy used in the data centre will cause heat to fasten the climate rising. It will ruin the progress that we made with trying to stop climate warming. This is not a good idea to build such enormous building for AI. We once lived without AI, so why do we need such huge data centres built in lots of states and countries? Please think this through because you clearly haven't grasped what will happen if this huge data center is built. This will not be good. We are already facing huge problems in the world due to climate warming, so why are we trying to promote it. If this project is stopped, we will still have hope to help our earth and us. You, me, our families, friends, animals, the entire earth will face consequences of our careless actions and decisions. We need to stop this project, we already did enough damage to our earth that we can't even fix entirely. I hope my message will reach the right people and I hope my voice and choices will be heard and understand. I only hope for the best for all of us, not only me. I strongly believe that we can help our planet, help us and help others. I hope my and other people voices will help you to open your eyes, to help you see and understand the consequences of our actions. Open your eyes, see the problems that come with AI data centers being built.

I wouldn't be writing this message if I was Not Concerned for our own health and our planet's future and health. Thank you for reading my message, for hearing my thoughts and my voice. I hope we can protect what little we have left of our wonderful earth.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
