

Michael Solano

Please don't take away the people's resources that are already limited to begin with. Air quality is important to New Mexicans, especially those that have allergies or medical conditions that affects breathing. We do not want to suffer from breathing polluted air. I have asthma and it's gotten worse ever since COVID-19. Living in this desert takes up a lot of water, and the several droughts that have been occurring, has caused civilians to have less access to clean water. Please don't kill us systemically. Please don't build this DATA center that would consume the resources of our people and planet. You think it doesn't affect you, the lack of care for humanity because it's all for personal gain, power, and profit, until it does. It will catch up to you and your loved ones, and then, you too will experience the suffering caused by others. "Well damage is already done by many other companies and some people's poor choices". This way of thinking is immature. What matters most is humanity, and our quality of life. I do not approve of this DATA center to be here in the south.
