

Troy Williams

I am writing this comment to urge NMED to not go through with the approval of the approval of the fuel cell air quality permit for project Jupiter. These communities have expressed a majority disinterest and disapproval to the construction of this data center regardless of the energy sources and by continuing construction it tells them that theyre wants are no the priority. This communities wont benefit from this data center and will only lose more of the natural landscape of thier home. Even as a Coloradian the threat to nature due to data center construction concerns me and the halting of this one would ease people's minds nation wide. Thank you.
