I'm writing to oppose the Yucca Growth Infrastructure project and ask that you deny the air quality permit. The risks to human health posed by this proposed project, in terms of pollution, waste, and climate change impacts, are significant and unacceptable. The community of Dona Anna County already faces poor air quality and shouldn't be forced to endure more for out of state corporate interests. This permit needs to be denied. At the very least though the public should receive 60 additional days to review and comment on the permit request. If somehow the permit isn't denied, public hearings must take place Santa Teresa, in both English and Spanish, with an option to participate virtually. Do the right thing and protect our air, health, and local community, not corporate greed.
