

Sarah Halliday

Please do not allow the permanent destruction of this land, (or any land for the matter), to build data centers in NM. Data centers create short term construction jobs (NOT long term jobs of any type), they create noise pollution, they waste precious water and power intended for use by each of us.

We need serious, and effective regulation for these centers (in addition to AI itself), as well as proof of necessity, before we allow another chapter to be written in the history of NM showing how we poisoned our planet and ourselves.
