

Melyssa Harrison

Project Jupiter is incredibly unnecessary and extremely destructive to our environment. Santa Teresa Elementary and High School are located within five miles of this project site, along with day care centers. This is an environmental injustice to these children who are especially vulnerable to the health impacts of NOX, CO, and VOCs. Project Jupiter's power plant will release up to 10 million tons of climate-warming greenhouse gasses every year. I urge the NMED to outright reject YUCCA Growth Infrastructure, LLC's air permit application for the YGI Microgrid. Additionally, NMED should give the public 60 days of additional time to review and comment on the Application to ensure everyone can meaningfully comment and participate.
