

## Samantha proctor

I oppose project Jupiter for its climate Impact. We don't NEED AI. We NEED our earth. Allowing a huge data center to be built in New Mexico when current climate change action is failing or non existent is going to doom the people in New Mexico. People can only handle so much heat for so long until people will move elsewhere. The long term implications of this project are damning. Project Jupiter's power plant will release up to 10 million tons of climate-warming greenhouse gasses every year. New Mexico is a beautiful place and making it hotter and dryer will destroy New Mexico first and our earth later. The pro's of this project do NOT outweigh con's.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
