I come in support all the way from Chicago, Illinois. I am here to show support, I am here to help defend the people. This plant is not needed and should not be needed in any instance in the world. It is not fair that at a young age others and I all over the world are fighting for us to receive a healthy planet. It is not fair that as we are getting older, you people want to ruin the only place of living we have. It is not fair, that many of us cannot live how we want to live because of the harsh conditions these plants and data centers have brought into our lives. New Mexico does not need a plant, it does not need the people in Doña Ana County risking their health for others. These are people living there, there are animals living there, this is the only planet given to us. Why should we let it get mistreated. Why should WE accept getting sick? Why should we accept being driven away? Why would we accept innocent lives getting affected over a plant? Think once in your lives for how unhealthy this whole situation can be? What if it was your family risking their health? And for what? A plant that will lose business in couple years because people are too unhealthy to work due to the same plant that caused those illnesses.
