

Lindley Hornsby

This concerned community member is pleading to NMED to DENY the air quality permit submitted by yucca growth infrastructure. Fuel cell technology is an experimental form of energy production; the public health risks of implementing this type of energy generation exceeds any economic benefit. New Mexico has long been a sacrifice zone and in 2026 we should know better than to experiment with our communities lives for the profit of an out of state company. NMED, please protect the community members of southern Dona Ana, El Paso and Chihuahua, MX — all of whom are under the purview of this project's impact.

I appreciate your service to our state and chosen responsibility to keep everyone safe and healthy.
