

Le'Croy Martinez

This cooperation is telling us to believe in information that isn't correct about how much environmental resources they will be taking from our home lands. Due to the current situation in the world with global warming, we have already been suffering droughts and lower water supplies. If this Project Jupiter is planning to use ONE MILLION GALLONS of OUR WATER, then we should NOT let them build this data center here. Humanity has survived for thousands of years, and has evolved to create great things without AI. We as the people do not need AI, we need water and resources. AI does not have the ability to give water to the people and the land. AI is harmful, and wasteful. If the world continues to rely on the upbringing on AI by using water to cool the systems down, then this new generation of kids will not have any usable water left. GENERATIONS will suffer by the hands of these corporations if they cannot stop their greed. Building this data center here in New Mexico, or anywhere else, is a horrible idea that should not be even considered.
