

Nancy Tapp

As a citizen of Las Cruces and the state of New Mexico I am protesting any permits given to Jupiter Project. Our air quality will be in jeopardy and will cause an increase in asthma and other breathing difficulties that many of our children and elderly suffer from. This data center was slid under the carpet before any of us in Las Cruces knew what was happening. This is a disgrace to our state and I'm sorry to say, to our local government here in Dona Ana County.

I realize this protest is against another air quality permit, but I'd like to address the water issue again. Jupiter will use 1 million gallons of water a day! Eventually, they'll deplete our aquifer. Living next to a large pecan grove a twenty year worker told me that they had to drill down another 200 feet to get enough water to flood the fields, which they do 9 times a year. This industry will compete with the Jupiter Project. It appears to me, excuse my language, a fuckin' free for all for any industry with mega money.
