

Rachel Hilley

I am writing to oppose project Jupiter.

Over and over again similar datacenter projects in this country have been exposed causing even more pollution and using even more water than their proposals, while providing fewer jobs. Resident energy and water bills skyrocket, with no benefit to anybody but the billionaire owners of these companies. Project jupiter has already moved the goalposts multiple times, and the companies involved have already been caught doing illegal dumping of toxic compounds in municipal landfills in other projects. With such a clear and repeated pattern of deception and exploitation it is clear that this is their business model, and it will be repeated in our state as well.
