Data centers threaten the livelihood of all who live around it. They deplete water and natural resources, release huge amounts of carbon dioxide into the atmosphere, and use up tons and tons of electricity in the surrounding area. The implementation of generative AI on this level truly will not benefit human kind in the slightest. We have survived our entire existence without AI. If its so harmful to humans and the environment, genuinely what is the point of continuing to create huge data centers that do nothing but harm the earth. People are already dying in Europe from CLIMATE CHANGE-led global warming, and the states are experiencing the hottest recorded summer. If you care about the wellbeing of the planet and humans, because you sure are foolish for thinking AI will benefit humanity, please stop the integration of this huge data centers that will do nothing but accelerate human extinction. Deny the air quality permit application or hold a public hearing in Santa Teresa. Approving this permit would be blatant environmental racism on a governmental level. Please, the people of Pennsylvania, beg you to put a stop to this.
