

Sarah Azibo

Project Jupiter places the health of all living beings in New Mexico (and beyond) at extreme risk. It denies us of the valued resources of clean air and water without an ounce of consideration or thought to the irreparable destruction it will cause. I wake daily to the air quality report to see if I'm able to step outdoors with my respiratory condition. Recent fires in the Bosque filled my lungs with suffocating smoke this weekend while more smoke from fireworks added to that harm. To imagine our air quality decreasing even further, with players knowingly producing dangerous levels of emissions from this project, is untenable. I need no reminder of how precious air is to sustaining us, nor should you. I implore you to prevent this project from going forward.
