

Roberto Reyes

Dear NMED staff, I am a resident of Austin Texas. Yes I am not a resident of New Mexico but I am a resident of the world we share. This is OUR WORLD, I write this letter to share my opposing view on the opening of your new data center / your project 'planet Jupiter' . Constructing this center you will release millions of green house gasses into our atmosphere causing a further pit into our already enormous pit of a problem we have known as global warming. This problem has already done more damage towards our earth such as the disruption of one of the largest eco systems we have known as the arctic. Sea levels are rising, glaciers are melting and our beloved polar bears are dying. If you conduct the opening of this AI facility our future will be in further more danger, nearly irreversible as we know it. Not only the arctic but our coral reefs, the tropical beautiful artifacts of the ocean that we love are now gone. Due to waste which is also greatly impacted by artificial intelligence. This will also be to blame if you further conduct the opening of the New Mexico project planet Jupiter. Toxic waste is real and your power plant fueling your AI facility center will produce enormous amounts of it which could very well be the demise of our environment furthermore our future. I sincerely write this letter in attempt at signaling my love for this earth and the beauty it carries.

Sincerely, Roberto Reyes.
