I may not live near the data center, but I don't want the environment to get worse. To release 10 million tons of carbon dioxide pollution is outrageous when right now the Earth is barely surviving. Additionally, the amount of unclean water or worse, no consumable water, align with this project construction is really terrible for the locals. I feel like there will be no future if this goes on. I am a kid, I should be worry about school and not this.
