I am a current resident of New Mexico and have lived here my entire life. I ask that you guys please don't let project jupiter be built. The fact that this project even got approved is ridiculous; NM is already going through a drought, and now they want to build a data center here??? That money could be going towards helping NM be a better place to live in, helping with homelessness, or literally any other problems we are facing right now. The amount of air pollution the center would cause yearly (10 million tons) should be enough to look at and not allow this to happen. There are schools and daycares not even 10 miles away from the data center, kids that could get sick from the harmful emissions that the center will be releasing. We don't need something like this built here; AI does nothing but harm to the environment and provides no positive impact whatsoever. All this will do is provide more and more issues for NM residents, especially the residents of Santa Teresa. PLEASE STOP BUILDING DATA CENTERS.

NMED should give the public 60 days of additional time to review and comment on the application to ensure everyone can meaningfully comment and participate.

I urge the NMED to reject YUCCA Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid. I ask the department to please hold a bilingual public hearing near the Santa Teresa community, so that residents can learn about the risks associated with fuel cell technology.
