I am a resident in New Mexico and I highly am against this center being built as it harms local communities, and it will take so many things away from people as it will reduce quality of living. Why do we need AI if we have survived so long without it? Furthermore, the money spent on this center could be better spent to help people instead of harming, many people in New Mexico are suffering and this center only brings more of it. These centers being built that I have seen effect people around them with reduced water, pollution, and waste that this data center will create and I guarantee that the person/company building this center will not care about the environmental impacts this center has and not do anything to fix its issues. People will suffer the consequences of this center being built and I think everyone should be against this as it effects people, creates pollution, and effects the future.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
