

Paulo Rivera

As a resident who contributes creatively to my community. I am gravely concerned about the environmental impact this so called Project Jupiter will have in our natural area. First off, the people were never informed of this agreement which was made behind closed doors with city council members. Second, there is NO time proven analysis that can guarantee there will be no harmful impact on our natural environment. Third, this invasion and assault by foreign corporate entities will only benefit the billionaire class. The bottom line is: Human beings and the ecological system are not meant to be exposed to massive amounts of heat and harmful radiation that this useless plant will generate. This will only lead to an environmental disaster if not stopped by the people and conscientious leaders in our community. I urge you to reconsider and eliminate this extremely hazardous proposal that will only cause irreparable damage to our beautiful environment. Thank you !
