

## Steve Castillo

After some reading about Project Jupiter, and in particular seeing that Project Jupiter will be using non potable water for system cooling and is going with the Bloom fuel cells rather than gas turbines for electricity generation and is not solely being built for AI operations, and finally making investments in the community, I fully support the project going forward. BTW, I am a 85% retired electrical engineer with some understanding of project Jupiter's technical infrastructure.

Sincerely,  
Steve Castillo
