

## Xochil Moreno Perez

Do not grant any permits that allow the construction of any type of AI Centers. This community does not need any type of center that will waste our natural resources such as water and energy, and that will only grant a few jobs and opportunities while it's being constructed but once finalized will only need between 50/500 employees to operate while using millions of gallons of water and negatively impacting our power grids by their excessive consumption of energy to operate. This community wants to preserve our land, water and energy intact for our future generations to enjoy, not for computers to destroy.
