

Rodolfo Baylon

As a fellow community member. I would like to emphasize the importance of preserving our natural resources. Water quality and air quality. We live in an arid , sand and dust laden environment. We don't need additional pollutants, adding to our daily struggles . We as a community should strive to go more of a greener fuels. I oppose any sort of data center, and or its use of fossil and non regenerative fuel sources. Need to work on cleaning up carbon, not inducing more to the environment.
