

Bianca Opio

I am opposed to project Jupiter. Ai data centers take up too much space, water, and power, for what they're worth. They drastically increase the temperature around them, and make utilities for the people who live close by more expensive. They also pollute the area around them, leaving sediment in the water and spewing toxic gasses in the air. We have bigger problems here in this country and spending money on a data center is wasteful. Clearing out land for a massive ugly data center is a waste of time and resources and I heavily oppose it.
